SVEIN RASMUSSEN

Are you an Olympic windsurfer, a seasoned Techno rider or a freerider looking at taking part in local events? Come fly with iQFoil. Course racing, GPS, slalom and long distances. Let's test what formats are best suited in your local sailing area. We at Starboard realize that being associated with the iQFoil class means new responsibility, expectations and determination. A whole new chapter is about to take shape and as we are just getting started, we need your help and guidance to create positive environment that can grow, prosper and become the most exciting windsurfing community of all time. Let's also figure out ways to unite in protection of our oceans while having loads of fun foiling into the future.

Please do contact us with your ideas: iQFoil@star-board.com

REMI VILA

With the uprising of the iQFoil, we bring you the most exciting and up to date equipment to the Olympics. We offer an affordable package that brings high level racing performance in all conditions.

Let's bring the fun again to the Olympic scene and beyond.

Remi Vila
iQFoil development team

TIESDA YOU

The Race foil that started it all.

It started with weekend windsurfers. Then came Formula racers, PWA racers and the Olympic community.

From this opportunity was born the iQFoil vision: **To inspire windsurfers of all levels** - weekend racers, professionals and Olympians alike - to race together at a wide range of exciting events, on fair, simple and affordable foiling equipment of the highest performance.

One board, one sail, one boom, one foil, one fin: you can race with your friends every weekend or go for gold every quadrennial. There's never been such a unifying opportunity in windsurfing and that's the most exciting part about the iQFoil project.

Tiesda You,
Founder, Starboard Foils

We have stopped using virgin plastic packaging on our boards, but the board's styrofoam, paint, epoxy and EVA come from fossil fuel/oil.

With the help of Starboards' internal plastic tax, we fund the Plastic Offset Program (POP).

After calculating the plastic footprint of the iQFoil, it was settled that the Starboard Plastic Offset Program will collect 2.4 kg of plastic trash for each iQFoil board sold. Our target this year is to collect a total of 50,000 kg from beaches around our test center in Thailand. We will keep on picking plastic trash until regulations are in place to stop the destruction of our oceans.

HEYERDAHL
CLIMATE PARKS

We want to share that the climate crises partially come from deforestation. We need to regenerate forests for the challenging years ahead. Sea trees or mangroves are important players as they absorb more CO2 than any other sources while also helping clean the ocean, and sheltering coastal villages from heavy storms.

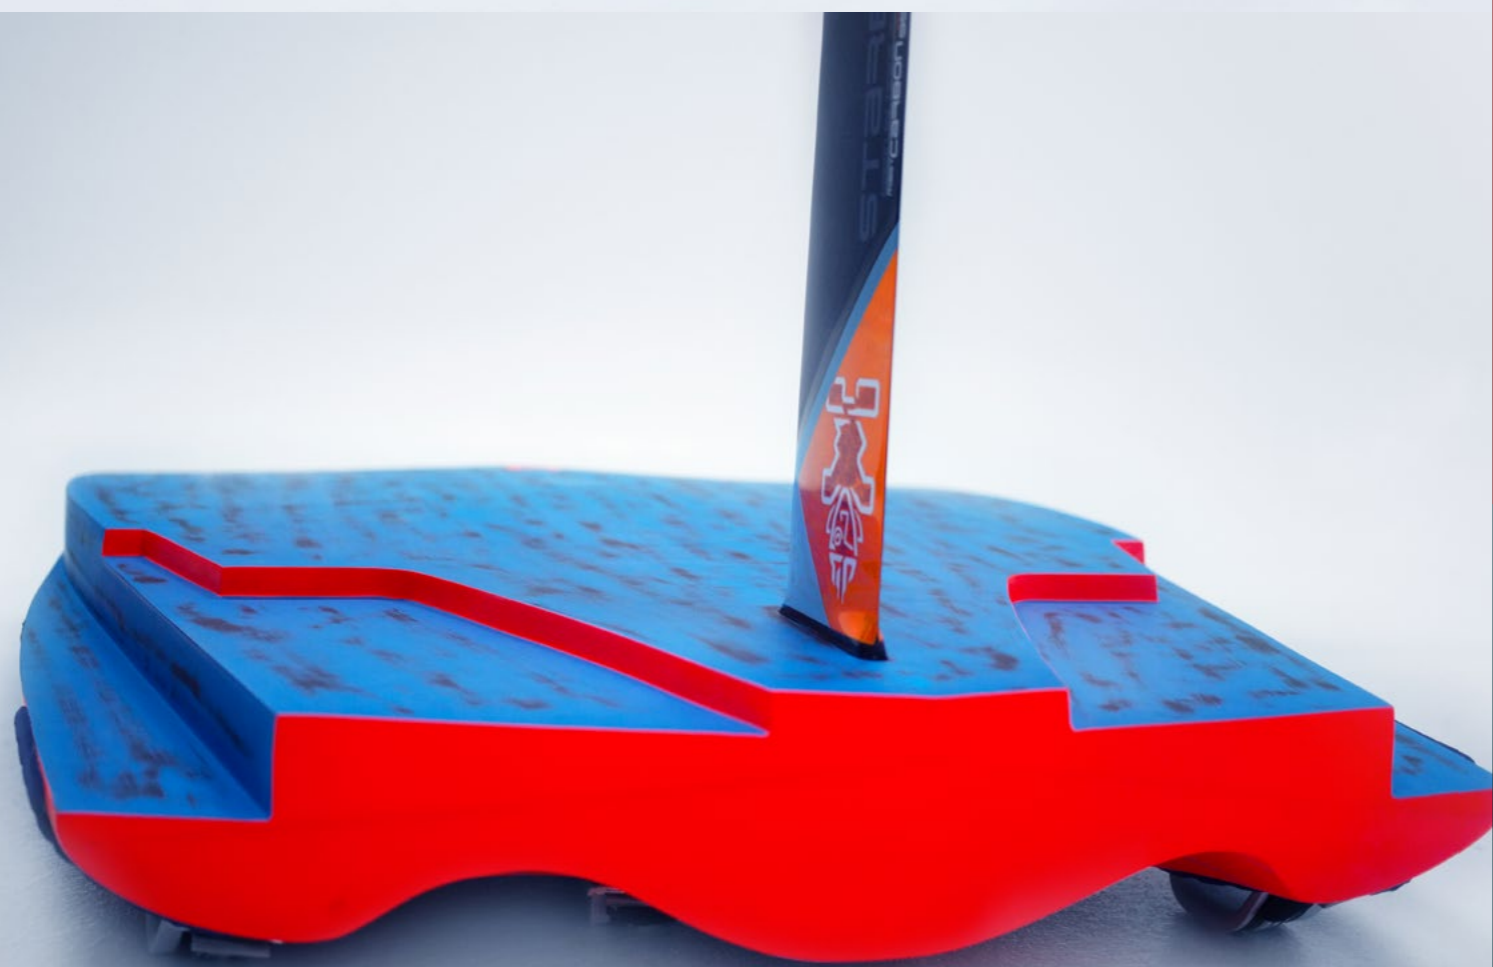

We are a partnering in replanting one billion mangrove trees over the next 10 years. The pilot project in the Thor Heyerdahl Climate Park with six million trees is already finished.

Calculating the total carbon footprint of an iQFoil based on production and raw materials, we found that it creates 0.1 ton of CO2.

For each Olympic Starboard iQFoil we will plant 10 trees, absorbing 10 tons CO2 over 20 years, making the iQFoil board 100 x climate net positive.

Every tree counts and with your help we can inspire others to follow suit.

LOOKING INTO THE FUTURE

We want to see iQFoil events become 10 x climate net positive, ban all types of single use plastic and help the iQFoil class not only become the best in the world but also **the best for the world.**
